

### Use Case & User Scenarios of Defect Tracker - Team B

Use Case	Scenarios
Login	User can login only using employee ID & password
	User can't login using invalid employee ID or password
Submit defect	QA can add defect
	QA can upload screenshots of defect
	QA can assign a defect to a developer (Assumption: QA knows who developed that part of the application)
	QA can review, edit & delete the defect
	After a defect being assigned to a developer QA can't edit or delete the defect
	Only QA can reopen & close the defect
Receive notification	Developer will receive a notification after being assigned to a defect
	QA will receive a notification after the status of the defect being changed to "To be tested"
View defect	A Developer can view everyone's defect
Change status	Only the developer who being assigned to the defect can change the status of that defect
